

# HeartSine® samaritan® PAD

Automated External Defibrillator (AED) for Public Access

## Be Prepared for Cardiac Emergencies Without Impacting Your Bottom Line

Automated External Defibrillators (AEDs) have become an expected standard of care in the workplace, with many employees expecting AEDs to be readily available in office buildings, factories and manufacturing facilities. But how can you meet these expectations to ensure their safety without decreasing your bottom line?

Not all AEDs are created equal. The HeartSine® samaritan® PAD combines patented technology with one of the lowest costs of ownership on the market. And it's all available in a simple-to-use package that carries a warranty, that is second to none, with flexible finance and program management options that affordably help mitigate risk and liability in deploying these lifesaving devices.

You have a choice of AEDs for all of your facilities, so you should choose the AED that protects not only your employees and visitors, but your bottom line as well.

## Why HeartSine?

- ▶ **Low total cost of ownership**
- ▶ **Easy to use** due to simple two-button operation, intuitive voice/visual prompts and no lid to open or complex displays or controls
- ▶ **Complete AED solutions** available to manage all aspects of your AED deployment
- ▶ **Flexible finance options** that minimize your overall costs\*
- ▶ **An industry-leading warranty** for low total cost of ownership
- ▶ **One-change maintenance** for time-sensitive items, due to one expiration date on the pads and batteries, means less inventory to manage and order
- ▶ **Smallest, lightest and most rugged AED** on the market, offering the highest level of protection from water and dust (IP56) which is ideal for heavily trafficked environments
- ▶ **SAM 450P CPR Rate Advisor™** detects the rate of CPR being applied via the defibrillator electrodes—without the addition of accelerometers (or pucks) commonly used in other AED solutions—to provide verbal, audible and visual feedback to guide the rescuer through the entire resuscitation process

\* Available in some regions
